Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, drawn to a method of forming a plasma and a method of using the plasma to decomposing toxic substances.

Group II, claim(s) 10, drawn to a device for forming a plasma.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The common technical feature between groups I and II is a chamber containing two electrodes separated by a layer of dielectric material. Said common technical feature is not a special technical feature because it is found in the prior art. WO 02/35895 discloses a chamber having 2 electrodes and the electrodes are separated by an electrically insulating material (note Figure 7 and page 11, lines 4-6) Thus, the groups do not share a special technical feature and lack unity under PCT Rule 13.2.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
